

AUTOMATIC SPRAYING MACHINE (ASM 1-5)

A mechanised system for the delivery of coating to the inside of the mould, primarily designed for use with horizontal centrifugal casting machines.

The unit comprises of a spray lance fully supported by guide rollers and driven by an AC drive motor. The lance assembly is mounted on support steelwork which is easily manoeuvred on wheels and can be locked in any position to suit mould diameter.

The spray lance is fed via flexible tubing from a pressurised feed container which comes complete with solenoid operated shut-off valve and 3 way valve for easy cleaning.

Lance stroke is programmed so that it can be used between different size moulds/chills easily and quickly.
